Ulinnuha Alkindi

Undergraduate Computer Engineering Student at EEPIS |
Passionate on Embedded Systems & IoT
Surabaya, Jawa Timur, Indonesia

Ringkasan

I am a Computer Engineering student specializing in IoT systems and embedded development, with strong hands-on experience in ESP32 and Arduino programming using C/C++ for real-time data acquisition and system control. I work with a wide range of environmental and industrial sensors, focusing on integration, calibration, and signal stability, and implement reliable communication using MQTT and Modbus (RTU/TCP) for scalable IoT and industrial systems. I also perform network-level analysis using Wireshark for debugging and optimizing data transmission, and utilize Python for data processing and validation, supported by basic web and mobile development (Java & Flutter) for monitoring and control interfaces, with a focus on building robust, efficient, and real-time IoT solutions.

Pengalaman

PT Petrokimia Gresik (Official)

IoT Engineer

Januari 2026 - Present (9 bulan)

Jl. Jenderal Ahmad Yani - Gresik 61119

I am a Computer Engineering student currently undertaking an internship at PT Petrokimia Gresik as an IoT Engineer Intern. In this role, I am actively involved in developing and implementing Internet of Things (IoT) solutions for industrial monitoring and process optimization, particularly in environmental parameter monitoring such as wastewater quality.

I have a strong interest in IoT, embedded systems, and network-based data monitoring. During my internship, I work extensively with microcontrollers such as ESP32, implement communication protocols like MQTT and Modbus, and integrate industrial sensors to build reliable real-time monitoring systems.

In addition, I am experienced in network analysis using tools like Wireshark and developing dashboards for data visualization. I continuously improve both

my hardware and software skills to create efficient and practical technology solutions for industrial applications.

Core Skills:

Internet of Things (IoT)

Embedded Systems (ESP32, Arduino, STM, Raspberry PI)

MQTT & Modbus Communication

Sensor Integration (pH, EC, TDS, etc.)

Networking & Packet Analysis (Wireshark)

Basic Web & Mobile Development

Data Monitoring & Dashboard Systems

I am open to collaboration, project development opportunities, and discussions related to IoT and industrial technology.
